**Drilling Recommended at the Rover Project, NT.**

EL8994 – ROVER PROJECT, NT  
Navarre Resources Pty Ltd 100%  
(Westgold to acquire 100% of Navarre)

Westgold are pleased to announce that diamond drilling at the Rover Project, near Tennant Creek in the Northern Territory has recommenced. Drilling will initially focus on the Explorer 108 Pb-Zn Prospect where earlier in the year the Company intersected significant widths of mineralisation including 70 metres at 8.1% Pb + Zn and 34m at 9.0% Pb + Zn.

The drilling at Explorer 108 will aim to test for along strike extensions of mineralisation to the north and south of the current drilling and to test the up dip potential above the previous intersections.

Drilling will continue until the Christmas break and at least five holes should be completed in this period. Depending on the severity of the wet season, the Company is hoping to then recommence drilling again in early 2007.
