

Rover – Results Update

**Further “Bonanza” gold at Western Zone, Rover 1
6m @ 41.1 g/t Au**

**Lead-Zinc mineralisation extended at Explorer 108
6m @ 11.58% Pb+Zn, 0.56g/t Au
5m @ 5.04% Pb+Zn, 3.66g/t Au
4m @ 5.22% Pb+Zn, 1.06g/t Au**

Westgold is pleased to announce that further significant high grade results from the Rover 1 Cu-Au and the Explorer 108 Pb-Zn-Ag deposits have been received from drilling completed in late 2009.

At Rover 1, high grade gold mineralisation of **6m @ 41.1g/t Au** has been reported from the Western Zone and provides further encouragement to the potential at Rover 1. This high grade mineralisation which includes an exceptional **1m @ 193g/t Au** (or approximately 6 ounces per tonne) correlates to the visible gold zone reported on 22 December 2009 and occurs within a broader zone of copper and gold mineralisation.

**WGR1D044-4 28m @ 9.08g/t Au, 0.43% Cu, 1.93g/t Ag, 0.14% Bi, 0.04% Co from 496m
including 6m @ 41.11g/t Au, 0.66% Cu, 4.83g/t Ag, 0.41% Bi, 0.03% Co from 513m**

Assays for a further three holes at Rover 1 remain pending and are expected in the next two weeks. Westgold expects to be in a position to release its maiden Identified Mineral Resource Estimate for Rover 1 after receipt and assessment of these final pending assays.

At the Explorer 108 Pb-Zn-Ag deposit, located approximately 40km to the west of Rover 1, a single new drill hole was completed on the eastern margin of the deposit targeting extensions to the high grade zone (46m @ 11% Pb+Zn, 0.19g/t Au, 52.6 g/t Ag, 0.14% Cu) previously defined in drill hole NR108D026. This recent drilling has intersected and confirmed extensions to the mineralisation approximately 100m down dip to the east of the current resource limits. The more significant results include:

**NR108D049 48m @ 1.35% Pb, 2.13% Zn, 0.74g/t Au, 8g/t Ag from 545m
including 5m @ 1.49% Pb, 3.55% Zn, 3.66g/t Au, 7g/t Ag from 562m
including 4m @ 1.98% Pb, 3.24% Zn, 1.06g/t Au, 10.5g/t Ag from 570m
including 6m @ 4.79% Pb, 6.79% Zn, 0.56g/t Au, 21.83g/t Ag from 587m**

The Company expects to re-commence drilling programmes at Rover 1 in March 2010.

Table 1 Drillhole Location Data

Hole_ID	Northing (m)	Easting (m)	Dip (degrees)	Azimuth (degrees)	Depth start (m)	Depth final (m)	Comments
NR108D049	7795770	324790			0	710.15	Explorer 108
WGR1D044-4	7787780	359240	-78	344.7	239	579.5	Western Zone

Co-ordinates in GDA94, Zone 53

Intercept Notes

*Assays based on a nominal 1 metre sample of cut half NQ and HQ core.
Analysis of gold by 30g Fire Assay, AAS Finish other metals by Four Acid Digest, ICP-AES Finish.
All intersections are reported using uncut upper assays.
All intersections reported are downhole lengths.
Preliminary estimate of true width is approximately 50% of downhole length.*

Competent Persons Statement

The information in this report that relates to exploration, mineral resources or ore reserves is based on information compiled by Mr Andrew Beckwith (B.AppSc.) who is a full time employee of Westgold Resources Limited, is a member of the AusIMM. Mr Beckwith has sufficient experience which is relevant to the style of mineralisation and type of deposit under consideration and to the activity which he is undertaking to qualify as a competent person as described by the 2004 Edition of the "Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves". Mr Beckwith consents to the inclusion in this report of the matters based on his information in the form and context in which it appears.

AngloGold Clawback Rights

The tenements in the Rover Project are owned by Westgold (100%), however AngloGold Ashanti Australia Limited hold certain clawback rights to tenements:- SEL27039 (excluding the Explorer 108 Pb-Zn-Ag Deposit area), EL24541, EL25511, EL25427 and applications EL26537 and EL26242. Mineralisation intersected in the Western Zone is located within EL24541.
